

Core Project Achievements for KPI Submission

Executive Summary

During the review period, I led and contributed to the delivery of multiple business-critical digital platforms across online education, e-commerce, and institutional services. My responsibilities covered solution architecture, backend and full-stack development, streaming infrastructure, DevOps, deployment, production support, technical troubleshooting, team collaboration, and ongoing system improvement.

My primary project was IOU.AC, the online learning platform of International Online University. I led the technical team and contributed to the complete delivery of the platform, including LMS functionality, video processing, streaming services, cloud infrastructure, storage, deployment, and production operations.

In parallel, I led the technical delivery of the CPCN LMS, a commercial project associated with Nestlé Bangladesh, achieving 100% client satisfaction and supporting the successful completion of the first program batch. I also contributed to the development of commercial e-commerce products and provided technical support for the development, deployment, and operation of the new Daffodil International University website.

These projects demonstrate my ability to lead teams, deliver projects within planned timelines, manage complex technical requirements, support production systems, resolve technical issues, and contribute to the complete software development lifecycle.

Project 1: CPCN LMS – Commercial Project with Nestlé Bangladesh

Project: Certification Program on Child Health & Nutrition (CPCN)

Platform: [CPCN LMS](#)

Project Type: Commercial LMS Development

Key Collaboration: Nestlé Bangladesh

Client Satisfaction: 100%

My Role

- Technical Lead
- Solution and System Architect
- Backend Lead
- Full Backend Developer
- DevOps Engineer
- Deployment and Infrastructure Support
- Post-Deployment Technical Support

- Team Leadership and Technical Coordination

Leadership and Delivery Responsibility

I led the technical team responsible for the CPCN LMS delivery. I coordinated technical activities, guided implementation decisions, reviewed development progress, supported issue resolution, and ensured that the project moved from planning and development to deployment within the agreed project timeline.

Through effective technical leadership and coordination, the project was successfully completed and deployed for operational use. The platform supported the first batch of the program, and the client provided 100% satisfaction with the delivered solution and support.

Key Contributions

- Designed the overall technical architecture of the LMS.
- Planned and implemented the backend architecture and core business logic.
- Developed and integrated backend APIs and required system functionalities.
- Implemented learning and certification-related workflows.
- Supported course, module, learner, and assessment-related functionality.
- Provided technical guidance to team members throughout the project.
- Led technical implementation, development planning, and issue resolution.
- Reviewed technical approaches and ensured alignment with project requirements.
- Performed DevOps activities for deployment, environment configuration, release management, and production support.
- Supported server, hosting, application, and deployment-related activities.
- Configured and maintained the production environment.
- Supported application releases and deployment troubleshooting.
- Coordinated technical communication with project stakeholders.
- Successfully completed the development and production deployment of the CPCN LMS.
- Provided full post-deployment technical support.
- Supported the successful completion of the first program batch.
- Maintained service continuity and resolved operational issues after launch.

Business and Organizational Impact

The project delivered a production-ready commercial LMS for the Certification Program on Child Health & Nutrition in collaboration with Nestlé Bangladesh. The platform supports online education and certification activities through structured course modules, learner-facing functionality, assessment workflows, and operational program processes.

The project achieved:

- 100% client satisfaction.
- Successful production deployment.
- Successful completion of the first program batch.
- Reliable post-deployment technical support.

- Delivery of a commercial-grade LMS solution.
- Effective coordination between technical and project stakeholders.

Project Significance

This project demonstrates my ability to:

- Lead a technical team.
 - Own solution architecture and backend delivery.
 - Manage commercial project requirements.
 - Coordinate development and deployment activities.
 - Deliver a production-ready system within the planned timeline.
 - Provide reliable post-launch support.
 - Maintain strong client satisfaction.
-

Project 2: IOU.AC – Complete LMS Delivery and Primary Technical Project

Project: IOU.AC

Platform: [International Online University](#)

Project Type: Complete Learning Management System and Online Education Platform

Project Importance: Primary Project

My Role

- Technical Lead
- Team Lead
- Solution and System Architecture Contributor
- Full-Stack Developer
- Backend Developer
- Streaming and Media Infrastructure Contributor
- DevOps Engineer
- Cloud Infrastructure Contributor
- Deployment and Production Support Lead
- Ongoing Technical Improvement Contributor

Leadership and Delivery Responsibility

IOU.AC was my primary project during the review period. I led the technical team and contributed to the complete delivery of the platform from system design and development through deployment, production support, and continuous improvement.

As team lead, I coordinated technical tasks, supported team members, reviewed implementation approaches, helped resolve complex technical issues, and ensured that project activities progressed according to the planned timeline. I worked across application development, backend services, media processing, streaming, cloud infrastructure, deployment, and production operations.

My leadership helped the team deliver and maintain a complete online learning platform capable of supporting structured academic content, video-based learning, learner access, and operational requirements for an international online university.

Platform Scope

IOU.AC supports an online education ecosystem that includes:

- Academic programs and courses.
- Course sections and lessons.
- Structured learning content.
- Video-based learning.
- Learner access and authentication.
- Digital educational resources.
- Media processing and delivery.
- Online learning service operations.
- Administrative and platform management functionality.

Key Application and LMS Contributions

- Contributed to the complete development and delivery of the LMS.
- Designed and maintained backend architecture and service components.
- Developed and maintained APIs for platform functionality.
- Implemented full-stack features across the application.
- Developed course, section, lesson, and learning-content functionality.
- Supported academic content organization and delivery.
- Implemented and maintained learner-facing features.
- Supported authentication, authorization, and access-control requirements.
- Contributed to administrative and operational workflows.
- Integrated application services required for online learning.
- Performed system integration and technical problem-solving.
- Improved existing features based on operational requirements.
- Supported platform stability, maintainability, and scalability.
- Participated in technical planning, code review, debugging, and release preparation.

Streaming and Video Delivery Infrastructure

A major technical responsibility of IOU.AC was supporting video-based learning at scale. I contributed to the design, implementation, and maintenance of the media processing and streaming workflow.

Key contributions included:

- Developed and supported video upload and processing workflows.
- Used FFmpeg for video processing, transcoding, conversion, compression, and media preparation.
- Supported generation of streaming-ready video formats.
- Contributed to adaptive video delivery workflows where required.
- Supported video metadata handling and processing status management.
- Helped design reliable media storage and delivery processes.
- Integrated object storage for video files and processed media.
- Supported secure and scalable access to stored media assets.
- Assisted with video processing troubleshooting and failed-job resolution.
- Improved the reliability of media processing and delivery operations.
- Supported the delivery of video content for online courses and lessons.

Cloud Infrastructure and Storage

I contributed to the use and management of cloud-based infrastructure for application and media delivery.

Key infrastructure contributions included:

- Used Amazon S3 for scalable storage of video files, processed media, documents, and other digital assets.
- Supported storage organization, file management, and media lifecycle requirements.
- Worked with cloud-based content delivery infrastructure.
- Used CloudFront for content delivery and CDN-based distribution.
- Supported faster and more reliable delivery of static assets and video content.
- Assisted with CDN configuration and content delivery troubleshooting.
- Supported cache behavior, distribution settings, and delivery optimization.
- Helped separate application services, media processing, storage, and content delivery responsibilities.
- Supported secure access patterns for cloud-hosted resources.
- Assisted with infrastructure configuration for development, staging, and production environments.
- Supported monitoring and troubleshooting of cloud-based services.

DevOps, Deployment, and Production Operations

I played a significant role in DevOps and production operations for IOU.AC.

My responsibilities included:

- Supported deployment planning and release management.
- Configured and maintained development, staging, and production environments.
- Supported application deployment and service configuration.
- Assisted with deployment automation and repeatable release processes.
- Managed environment variables and application configuration.
- Supported server, hosting, application, and infrastructure setup.
- Coordinated application releases with development activities.

- Investigated deployment failures and production issues.
- Supported rollback and recovery activities when required.
- Assisted with service monitoring and operational troubleshooting.
- Supported production incident investigation and resolution.
- Helped maintain service availability and continuity.
- Supported database, application, storage, CDN, and media-service integration.
- Performed post-deployment validation and release verification.
- Maintained technical stability during ongoing platform updates.
- Supported continuous improvement of deployment and operational workflows.

Technical Problem-Solving and System Improvement

The platform required continuous technical problem-solving across application, infrastructure, and media services.

I contributed to:

- Diagnosing complex backend and integration issues.
- Investigating video processing and streaming-related problems.
- Investigating storage, CDN, and media delivery issues.
- Improving application performance and reliability.
- Supporting production issue analysis and resolution.
- Reducing operational risks through better deployment and troubleshooting practices.
- Improving maintainability through reusable technical approaches.
- Supporting the team during high-priority technical incidents.
- Evaluating technical solutions based on scalability, reliability, security, and operational requirements.
- Implementing improvements based on user, academic, and business needs.

Business and Technical Impact

IOU.AC was successfully delivered as a complete online learning platform for International Online University. The platform supports structured online education, academic content, course and lesson delivery, video-based learning, cloud-based media storage, streaming, and ongoing operational services.

The project demonstrates:

- Technical leadership of a primary project.
- Team leadership and coordination.
- Complete LMS delivery.
- Full-stack and backend engineering.
- API and system integration.
- Video processing with FFmpeg.
- Streaming service implementation and support.
- CloudFront-based content delivery.
- Amazon S3-based media and asset storage.
- Cloud infrastructure support.
- DevOps and deployment ownership.

- Production environment management.
- Operational troubleshooting and service continuity.
- Scalable online education platform development.
- Ongoing maintenance and technical improvement.

Project Significance

IOU.AC represents my strongest evidence of technical leadership and end-to-end project ownership. I led the team while also contributing directly to critical technical areas, including backend development, LMS functionality, video processing, streaming, cloud storage, CDN delivery, DevOps, deployment, and production support.

This project demonstrates that I can lead a team while remaining actively involved in complex engineering work and the delivery of a large-scale platform within the planned project timeline.

Project 3: Commercial E-Commerce Product Development and Technical Support

Project: Commercial E-Commerce Products

Project Type: E-Commerce Product Development, Deployment, and Technical Support

Period: 2025

My Role

- Software Developer
- Backend and Full-Stack Developer
- Commercial Product Development Contributor
- DevOps and Deployment Support
- Technical Support Engineer
- Production Maintenance Contributor

Key Contributions

In 2025, I contributed to the development and delivery of commercial e-commerce products. My work included application development, backend implementation, deployment support, technical troubleshooting, and ongoing maintenance.

My responsibilities included:

- Contributed to the development of commercial e-commerce products.
- Implemented and enhanced product-related platform features.
- Supported backend services and application-level functionality.
- Assisted with API development and system integration.

- Supported product, catalog, customer, order, and transaction-related workflows where required.
- Contributed to user-facing and administrative features.
- Assisted with database and application integration.
- Supported development, staging, and production environments.
- Performed application configuration and release support.
- Assisted with deployment and production issue resolution.
- Investigated technical problems and implemented corrective solutions.
- Supported maintenance, updates, and continuous product improvements.
- Helped ensure platform stability, availability, and operational continuity.
- Collaborated with team members to deliver commercial requirements within planned timelines.

Business and Technical Impact

My contribution to commercial e-commerce products expanded my experience beyond education technology and demonstrated my ability to work on business-focused digital products.

This project demonstrates:

- Commercial product development experience.
- Adaptability across different business domains.
- Backend and full-stack development capability.
- E-commerce workflow implementation.
- Deployment and DevOps support.
- Production issue resolution.
- Technical maintenance and operational support.
- Ability to deliver customer-facing products.
- Contribution to business-critical digital services.

Project 4: Daffodil International University Website Development, Deployment, and Technical Support

Project: New Daffodil International University Website

Project Type: Institutional Website Development, Deployment, and Technical Support

My Role

- Technical Contributor
- Deployment and DevOps Support Contributor
- Production Environment Support Contributor
- Technical Maintenance Contributor
- Bug Fixing and Troubleshooting Contributor

Key Contributions

I contributed to the development, deployment, launch, and technical support of the new Daffodil International University website. My involvement focused on technical support, bug fixing, deployment, production troubleshooting, and ongoing maintenance.

My responsibilities included:

- Supported the technical development and implementation of the new website.
- Assisted with deployment activities and production release preparation.
- Supported server, hosting, environment, and application configuration.
- Helped troubleshoot deployment and production-related issues.
- Identified, investigated, and fixed website bugs.
- Supported website updates, releases, and technical maintenance.
- Assisted with production issue resolution and service continuity.
- Provided technical support after deployment.
- Coordinated with relevant technical and project stakeholders when resolving issues.
- Helped ensure that the website remained stable, available, and operational.
- Supported technical improvements and maintenance activities as required.
- Assisted with server deployment and application configuration.
- Supported post-release validation and issue verification.
- Responded to technical issues affecting website functionality and availability.
- Helped maintain the operational continuity of the institutional website.

Business and Organizational Impact

The project supported the development and launch of a new institutional website for Daffodil International University. My contribution to deployment, production support, bug fixing, troubleshooting, and maintenance helped ensure a smooth transition from development to production and supported the continued operation of a high-visibility organizational platform.

This project demonstrates:

- Institutional website development support.
 - Deployment and production support capability.
 - Server and environment support.
 - Technical troubleshooting and bug fixing.
 - Release and maintenance support.
 - Collaboration with internal stakeholders.
 - Contribution to a high-visibility organizational platform.
 - Ability to support a production website throughout its operational lifecycle.
-

Leadership, Team Management, and Timeline Delivery

Across the CPCN LMS and IOU.AC projects, I performed technical leadership responsibilities while contributing directly to implementation.

My leadership and collaboration contributions included:

- Led the technical team for the primary IOU.AC project.
- Led the technical delivery of the CPCN LMS project.
- Distributed and coordinated technical tasks.
- Guided team members on implementation approaches.
- Reviewed technical progress and delivery status.
- Supported code review, debugging, and issue resolution.
- Coordinated development, deployment, and production support activities.
- Managed technical priorities based on project requirements.
- Communicated technical risks and dependencies.
- Supported timely decision-making during critical issues.
- Ensured that project activities remained aligned with planned timelines.
- Maintained technical continuity from development through production support.
- Delivered the projects successfully within the agreed project timelines.

My leadership approach combined direct technical contribution, team coordination, and operational ownership. This enabled me to maintain responsibility for critical technical areas while ensuring that the broader team remained aligned with project objectives and delivery commitments.

How These Projects Support My KPI

KPI 1: Measured Workflow Improvements Implemented

Evidence from CPCN, IOU.AC, the commercial e-commerce products, and the Daffodil International University website includes:

1. Developed reusable LMS architecture and backend development approaches.
2. Improved and standardized workflows for application development, deployment, maintenance, and production support.
3. Established repeatable technical practices for environment configuration and release management.
4. Applied DevOps practices across multiple projects.
5. Improved deployment troubleshooting and production issue-resolution processes.
6. Applied cloud-based storage and content delivery practices for media-heavy online learning services.
7. Improved video processing and streaming workflows using FFmpeg, Amazon S3, and CloudFront.
8. Strengthened cross-project technical support processes.

9. Applied lessons learned from LMS, e-commerce, and institutional website projects to improve subsequent delivery.
10. Improved collaboration between development, deployment, infrastructure, media, and project stakeholders.

Suggested Achievement: 2 / 2, subject to official KPI target confirmation.

KPI 2: Technical Readiness and Quality-Control Compliance

These projects demonstrate technical readiness through:

- System architecture planning.
- Backend development.
- API implementation.
- Full-stack development.
- LMS and learning-content functionality.
- Course, section, and lesson management.
- Video processing with FFmpeg.
- Streaming service implementation and support.
- CloudFront content delivery.
- Amazon S3 storage.
- Cloud infrastructure support.
- E-commerce product development.
- Institutional website development support.
- DevOps and deployment activities.
- Environment configuration.
- Production release support.
- Issue investigation and bug fixing.
- Technical troubleshooting.
- Production monitoring and support.
- Ongoing maintenance and system improvements.
- Service stability and continuity.
- Team leadership and technical coordination.

Suggested Achievement: 95%+, subject to formal quality and performance records.

KPI 3: Approved Value Additions and Capability Contributions

Value Addition 1: CPCN Commercial LMS

Successfully led and delivered a commercial LMS solution in collaboration with Nestlé Bangladesh, including system architecture, backend development, DevOps, deployment, production support, post-launch technical assistance, and support for the successful completion of the first batch. The project achieved 100% client satisfaction.

Value Addition 2: IOU.AC Primary LMS Project

Successfully led the technical team and contributed to the complete delivery of the International Online University LMS. The project included full-stack and backend development, API implementation, course and lesson management, video processing with FFmpeg, streaming services, CloudFront content delivery, Amazon S3 storage, DevOps, deployment, production support, and ongoing technical improvements.

Value Addition 3: Commercial E-Commerce Products

Contributed to the development and delivery of commercial e-commerce products in 2025, including backend and full-stack development, product feature implementation, deployment, maintenance, technical support, and production issue resolution.

Value Addition 4: New Daffodil International University Website

Contributed to the development, deployment, production launch, bug fixing, troubleshooting, and technical support of the new Daffodil International University website.

Suggested Achievement: 4 / 4, subject to the approved KPI target and available evidence.

KPI 4: Mandatory Records and Reporting Compliance

Relevant evidence may include:

- System architecture documentation.
- API documentation.
- Technical specifications.
- Project plans and delivery schedules.
- GitHub commits.
- Pull requests and code reviews.
- Issue and bug-resolution records.
- Deployment records.
- Release notes.
- Environment configuration records.
- Server and infrastructure configuration records.
- CloudFront configuration records.
- Amazon S3 storage and media-management records.
- FFmpeg processing configuration or implementation records.
- Streaming service documentation.
- Deployment checklists.
- Production validation records.
- Monitoring and incident records.
- Support and maintenance history.
- Project communication and approval records.
- Client satisfaction records.
- CPCN client feedback confirming 100% satisfaction.

- Project acceptance or completion records.
- Website release, bug-fixing, and maintenance records.

Suggested Achievement: Based on the completeness and availability of official documentation.

KPI 5: Approved Service Enhancement and Impact Achievement

CPCN

- Successfully led the development and deployment of the LMS.
- Achieved 100% client satisfaction.
- Provided DevOps and production deployment support.
- Provided post-deployment technical support.
- Supported the successful completion of the first program batch.
- Helped deliver a stable platform for online learning and certification activities.

IOU.AC

- Led the technical team for the primary project.
- Contributed to the complete delivery of the International Online University LMS.
- Supported structured online learning and academic content delivery.
- Contributed to course, section, lesson, and video-based learning functionality.
- Implemented and supported video processing using FFmpeg.
- Supported streaming services and media delivery.
- Used Amazon S3 for scalable media and asset storage.
- Used CloudFront for CDN-based content delivery.
- Supported DevOps, deployment, production operations, and service continuity.
- Contributed to ongoing technical improvements and platform maintenance.

Commercial E-Commerce Products

- Contributed to commercial product development.
- Supported e-commerce feature implementation.
- Supported deployment and production operations.
- Provided technical support and issue resolution.
- Helped maintain platform stability and operational continuity.

New Daffodil International University Website

- Contributed to the development and production launch of the new website.
- Provided deployment and environment support.
- Assisted with production troubleshooting and technical maintenance.
- Fixed website bugs and supported issue resolution.
- Provided ongoing post-deployment technical support.
- Helped maintain website stability, availability, and operational continuity.

Suggested Achievement: 90%+, subject to formal service-impact evidence.

KPI 6: Stakeholder Value and Feedback Achievement

Potential stakeholders include:

- CPCN Project Management Team.
- Nestlé Bangladesh stakeholders.
- Daffodil International University stakeholders.
- International Online University stakeholders.
- IOU.AC project stakeholders.
- E-commerce product stakeholders.
- Website development and project teams.
- Platform administrators.
- Instructors and academic teams.
- Website content and administrative teams.
- Learners, customers, visitors, and other end users.

The successful development, deployment, operational support, and continued improvement of these platforms provide strong evidence of stakeholder value.

The CPCN project achieved 100% client satisfaction, which is direct evidence of successful stakeholder engagement and delivery quality.

Additional supporting evidence may include:

- Client feedback.
- Stakeholder appreciation.
- Project acceptance records.
- User feedback.
- Service reports.
- Deployment records.
- Support records.
- Issue-resolution history.
- Project completion confirmation.
- Operational performance reports.
- Website maintenance and support records.

Suggested Achievement: Strong achievement, with final scoring based on official stakeholder feedback and documented evidence.

KPI 7: Approved Solution Deliverable Achievement

Major Delivered Solutions

Project	Deliverable	Status
CPCN	LMS Technical Architecture	Completed
CPCN	Backend Development	Completed
CPCN	Learning and Certification Workflow	Completed
CPCN	DevOps and Deployment Support	Completed
CPCN	Production Deployment	Completed
CPCN	First Batch Technical Support	Completed
CPCN	Client Satisfaction	100%
IOU.AC	Complete LMS Delivery for International Online University	Completed
IOU.AC	Technical Team Leadership	Completed
IOU.AC	Full-Stack Development	Completed/ Delivered
IOU.AC	Backend and API Development	Completed/ Delivered
IOU.AC	Course, Section, and Lesson Functionality	Completed/ Delivered
IOU.AC	Video Processing with FFmpeg	Completed/ Delivered
IOU.AC	Streaming Service Implementation and Support	Completed/ Delivered
IOU.AC	Amazon S3 Media and Asset Storage	Completed/ Delivered
IOU.AC	CloudFront Content Delivery	Completed/ Delivered
IOU.AC	DevOps and Production Support	Completed/ Delivered
IOU.AC	Production Deployment Support	Completed/ Delivered
IOU.AC	Ongoing Technical Improvements	Continuing

Project	Deliverable	Status
Commercial E-Commerce Products	E-Commerce Product Feature Development	Completed/ Delivered
Commercial E-Commerce Products	Backend and Full-Stack Development	Completed/ Delivered
Commercial E-Commerce Products	Deployment and Production Support	Completed/ Delivered
Commercial E-Commerce Products	Technical Support and Maintenance	Completed/ Delivered
Daffodil International University Website	Website Development Technical Contribution	Completed/ Delivered
Daffodil International University Website	Server Deployment and Production Release Support	Completed/ Delivered
Daffodil International University Website	Bug Fixing and Technical Troubleshooting	Completed/ Delivered
Daffodil International University Website	Post-Deployment Technical Support	Continuing/ Delivered

These projects provide substantial evidence toward achieving the approved solution deliverable KPI.

Recommended KPI Positioning

The strongest narrative for my KPI evaluation is:

During the review period, I led and contributed to the successful delivery of multiple business-critical digital platforms across online education, commercial e-commerce, and institutional services. My primary project was IOU.AC, the online learning platform of International Online University, where I led the technical team and contributed to the complete delivery of the LMS within the planned project timeline. My responsibilities covered system architecture, backend and full-stack development, course and lesson functionality, video processing with FFmpeg, streaming services, Amazon S3 storage, CloudFront content delivery, DevOps, deployment, production support, troubleshooting, and ongoing technical improvements. For the commercial CPCN LMS project associated with Nestlé Bangladesh, I served as Technical Lead and was responsible for system architecture, backend development, DevOps, deployment, production support, and post-deployment technical assistance. The CPCN project achieved 100% client satisfaction and supported the successful completion of the first program batch. In 2025, I also contributed to the development and delivery of commercial e-commerce products, including backend and full-stack development, deployment, maintenance, and technical support. Additionally, I contributed to the development, deployment, production launch, bug fixing, troubleshooting, and technical

operation of the new Daffodil International University website. These combined achievements demonstrate my ability to lead technical teams, deliver projects within planned timelines, manage complex cloud and media infrastructure, develop scalable software solutions, resolve technical issues, improve operational workflows, and provide reliable production support throughout the complete project lifecycle.
